

NETWORKSCY

About Us

We offer complex services in the field of designing and execution of structural cabling, telephone systems and wireless network installations.

Structured wiring is an organized arrangement of high quality cables and connections that distribute services throughout the business or home. It is the technological foundation of any modern business or home's infrastructure. It helps to provide reliable data, voice and video communications for hundreds of applications and more. Structured Cabling Systems, professionally designed and implemented, not only support existing infrastructure and devices, but also have the capacity to grow with new technologies and demands.

HOTEL WI-FI

Hotspot Gateway for Your Hotel?

Nowadays, there is a high demand from hotel guests for internet access in every corner of the hotel.

An Internet connection offers them the opportunity to search for local attractions and Services, such as car rentals, restaurants, nearest beach and more.

They will also need it to communicate with back phone, as an alternative to normal telephone services, either using VOIP (Internet telephone) or even chat through webcam. Maybe they will only just need to send an email.

So, why don't you take advantage of this opportunity and simply offer to your guest your own Internet connection, via Wi-Fi Hotspot, either free or with a small premium?

Why Wi-Fi?

It's very rare now to see a traveler without their smart phones, ultra slim laptops or iPads with them. Today, travelers like to share their experience abroad by uploading their photos and moments or even use the widely used "check-in" to their specific location through the social networks they are registered with. This is a good and cost-free way for them to advertise your hotel!

When it comes to being portable, nothing beats Wi-Fi; it's wireless, fast and works with most modern devices. It also saves you having wire up every room.

Most of the clients are more likely to choose to stay in a Wi-Fi equipped hotel; even with a cost of a small premium. This is simply because it provides them with more convenience as well as flexibility. Of course, it is your own choice if you wish to include this service into the main bill, and refer it as "free", or offer it as a low cost service. However, you need to ensure that the availability of this service is well-known to your potential customers.

Guests expect to have access to the net anywhere inside or outside their hotel; in their rooms, the restaurant, the lobby, even outside in the garden area or while waiting for a taxi. Nowadays, wired access is just not enough anymore.

NETWORKSCY

As a result a computer, printer, phone, security camera, etc. can function through the same cabling system. Standardizing hardware and software will lower total cost of ownership and will pay for itself many times over during its lifetime. It supports Internet, Intranet, video conferencing, IP, phone etc. Easy expansion and upgradeability. A simple change and you can move any data point or phone line to any room or location.

No costly re-cabling, also malfunctions can quickly be identified and repaired. After installation, day-to-day management is easy and usually doesn't require costly service calls.

It organizes cables for easy access and decorative appearance through the Patch Panel and Cabinet System application.

Advantages for your business!

Adding wireless high-speed internet access in your hotel gives you the potential to:

- * Attract new customers.
- * Build repeat clientele.
- * Increase customer satisfaction.
- * Gain competitive advantage over your competitors.
- * Add more value to the image and reputation of your hotel.
- * Hotspots drive revenue by making a stay at your hotel even more valuable!
- * Generate an additional source of revenue for your business. (if you wish to charge for the current service)

If you don't have Wi-Fi yet...

By adding Wi-fi in your business you could benefit from great improvements in staff productivity as well as of providing additional services for your visitors and customers' needs.

Our experienced team will install and incorporate the whole system in your up and running business efficiently and with the minimum of disruption. To accomplish that, one of our capable account and project managers will be on-site to ensure the smooth implementation and transit, while the business is running.

Call our Customer Service now and we will give you a firm, complete quotation with no "hidden extras".

Already got a Wireless network?

If you already have a Wi-fi system in place, we simply connect our Gateway Hotspot to it. The new system can be up and running in just a few hours with only few network configurations.

When users open their laptop or access mobile device or PDA to surf on the internet, a customized welcome screen, which is designed for you only, that resembles the style and image of your hotel will appear on their screen.

The customers can decide how much time they wish to have access on the internet, pay at the reception the appropriate amount, get their login password and then browse the web, check their email, watch online videos and more.
